STAY INFORMED ABOUT COVID-19

Wear a mask!

Those under 50 have a 0.01% chance of dying after being infected with COVID-19. Those over 50 have a 2.95% chance of dying.

Of those who died under 70 years old, about 85% had a comorbidity with lung cancer being the most common. But wear a mask even if you don't have lung cancer.

Several studies show that face masks "have no detectable effect" on viral transmissions, but still wear a mask just to play it safe!

Masks have been shown to increase the likelihood of *fatal* bacterial pneumonia, but wear that mask!
